ITEM F.4

Flashing Red Light for Stop Sign Behind Guard Shack

As requested by the Board at the August meeting, a battery-powered flashing red light was ordered and delivered to the District on 9/27. This fixture will be installed and put into service over the weekend.

Also discussed by the Board was a second option to the flashing light if it proves to be inadequate to alert drivers to the traffic hazard immediately behind the guard shack. This would be to install a red reflective STOP sign directly over the existing green bronze sign.

Such a stop sign would be installed with a temporary adhesive in the event the District decided at any time in the future to remove the red overlaid sign to prevent significant damage to the expensive bronze sign underneath.
