Progress Report – Fiber Optic Service for Beach Road

At the May 17 meeting of the CBRA, Mike Powers of Greenfield Communications gave a presentation on fiber optic service for the community. In June/July Greenfield mailed out an informative brochure to the community explaining their service and compared the cost with the competing services by COX and AT&T.

To date there has been little communication to the District from interested homeowners. With 186 homes on Beach Road, District Management has heard formally from one property owner. There are likely other homeowners interested and willing but supporting phone calls or emails are not reaching the District office.

In a recent field meeting with COX, on October 15th, regarding details of moving the District admin office the conversation with the construction planner turned to the topic of fiber optics. It turns out that COX is in the business of providing fiber optic service and the field planner offered to have a representative contact the District to discuss their program.

The District received a follow up email from COX Construction Services on 10/23 confirming that the Construction Services Manager has been notified and will be contacting us shortly.

It will be beneficial and advantageous to hear from a second service provider to get their opinion about fiber optic service.
