Road Striping/Pavement Repairs

The District contracted with Caliber Paving Company for annual pavement repairs and road striping, which got underway in mid-October. The repairs were primarily to the cement valley gutter that runs down the center of the road and a few areas of minor pavement damage.

The problems occurred with the pavement striping. The crew was clearly not paying attention to the layout and managed to turn a basic striping job into a disorganized mess.

The painting was stopped immediately after seeing how the work was being done and will resume after the contractor has devised a more effective 'black-out' procedure to cover over all the mistaken painting so we can start over again with a more professional striping application.

When an effective 'black-out' procedure is worked out, both the contractor and the District Manager will be present to assure the striping work is done more professionally.
