### Guest Access Control System

The new GoAccess gate management system transition is underway with the agreement approved by the Board at the June meeting.

The new surveillance camera system has been installed and ready for linking to the GoAccess program. While we are still operating through DwellingLIVE, and will continue for the next five to six weeks, the changeover is underway.

The importing of resident data is crucial to a problem-free transition and our current efforts are to work with residents to go through their DwellingLIVE files and purge old and outdated information for guests, service workers, and vehicles. When the time comes to conduct the actual upload of resident data, whatever is on file in DwellingLIVE will get imported into the GoAccess database and it would be great to start out with a clean slate.

Admin assistant Karen Morris can say more about this at the meeting.
